Alcohol Free Hand Sanitiser For
Professional Salon Use

INCREASING PUBLIC CONCERN OVER BACTERIA & VIRUS

Continued media coverage and advertising by the government during the swine flu pandemic has increased public awareness with regards to the potential harmful effects virus and bacteria can have on health. Professionals working in salons such as nail technicians appreciate and understand the importance of hand hygiene and sanitise their own and clients hands before and if needed during service. The use of alcohol gel is common in the market, but has its problems and limitations. We are proud to offer an alcohol free hand sanitiser which is kinder to hands and more effective against germs. Customers are increasingly becoming aware of hygiene and list it among one of the key factors in choosing a salon, a factor they are willing to pay a little more for.

MRSA

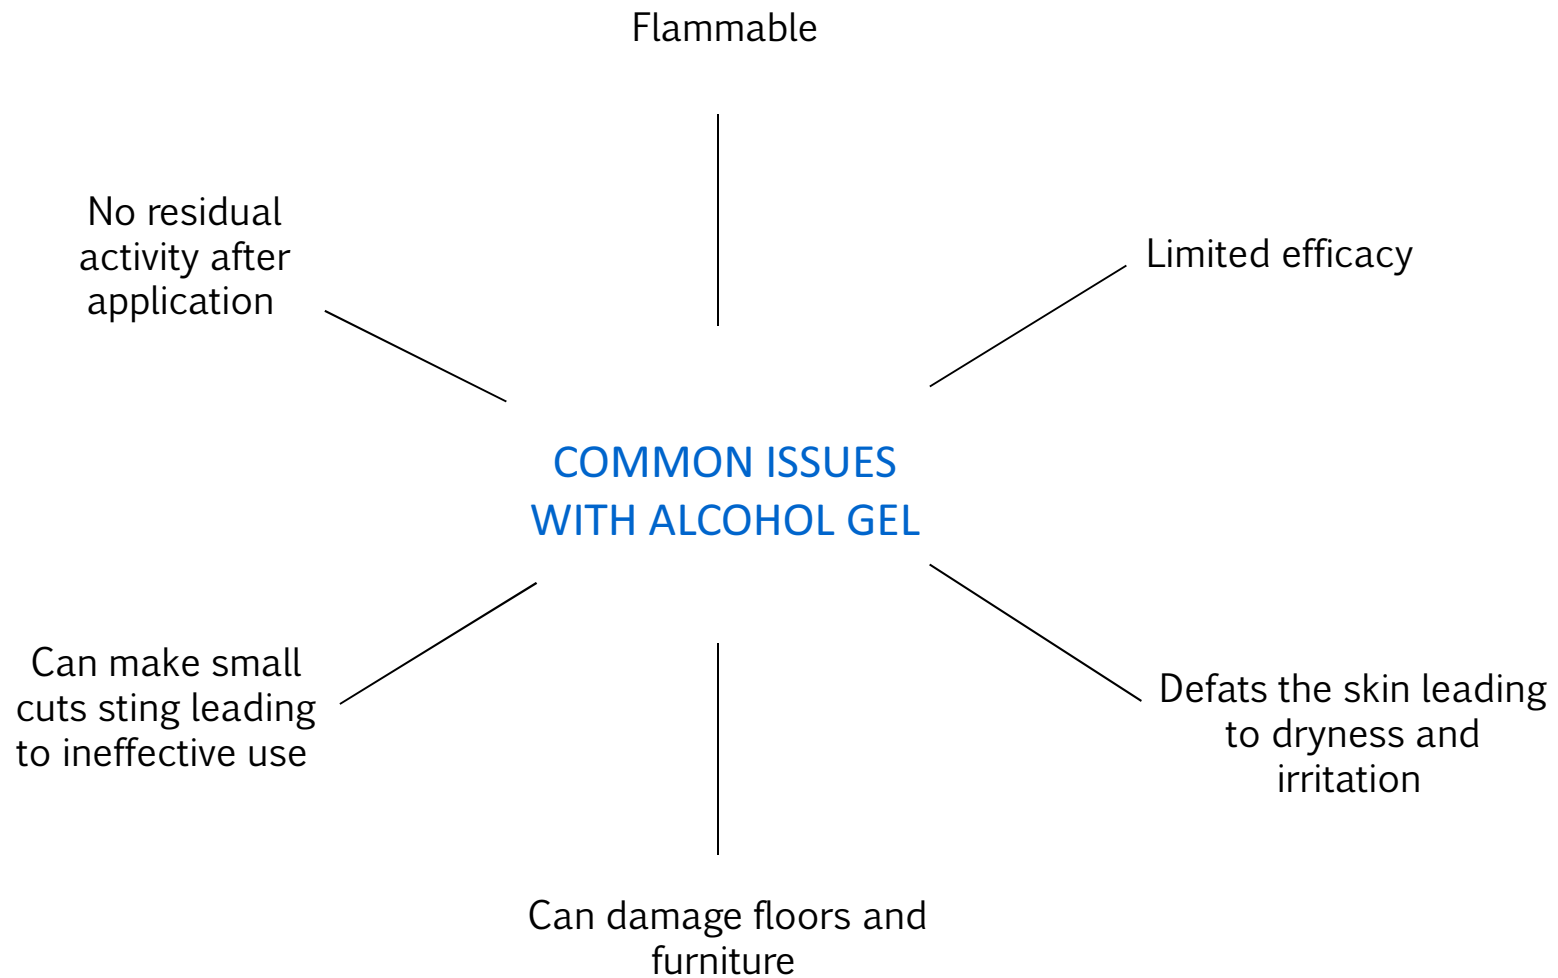

SARS

Avian Flu

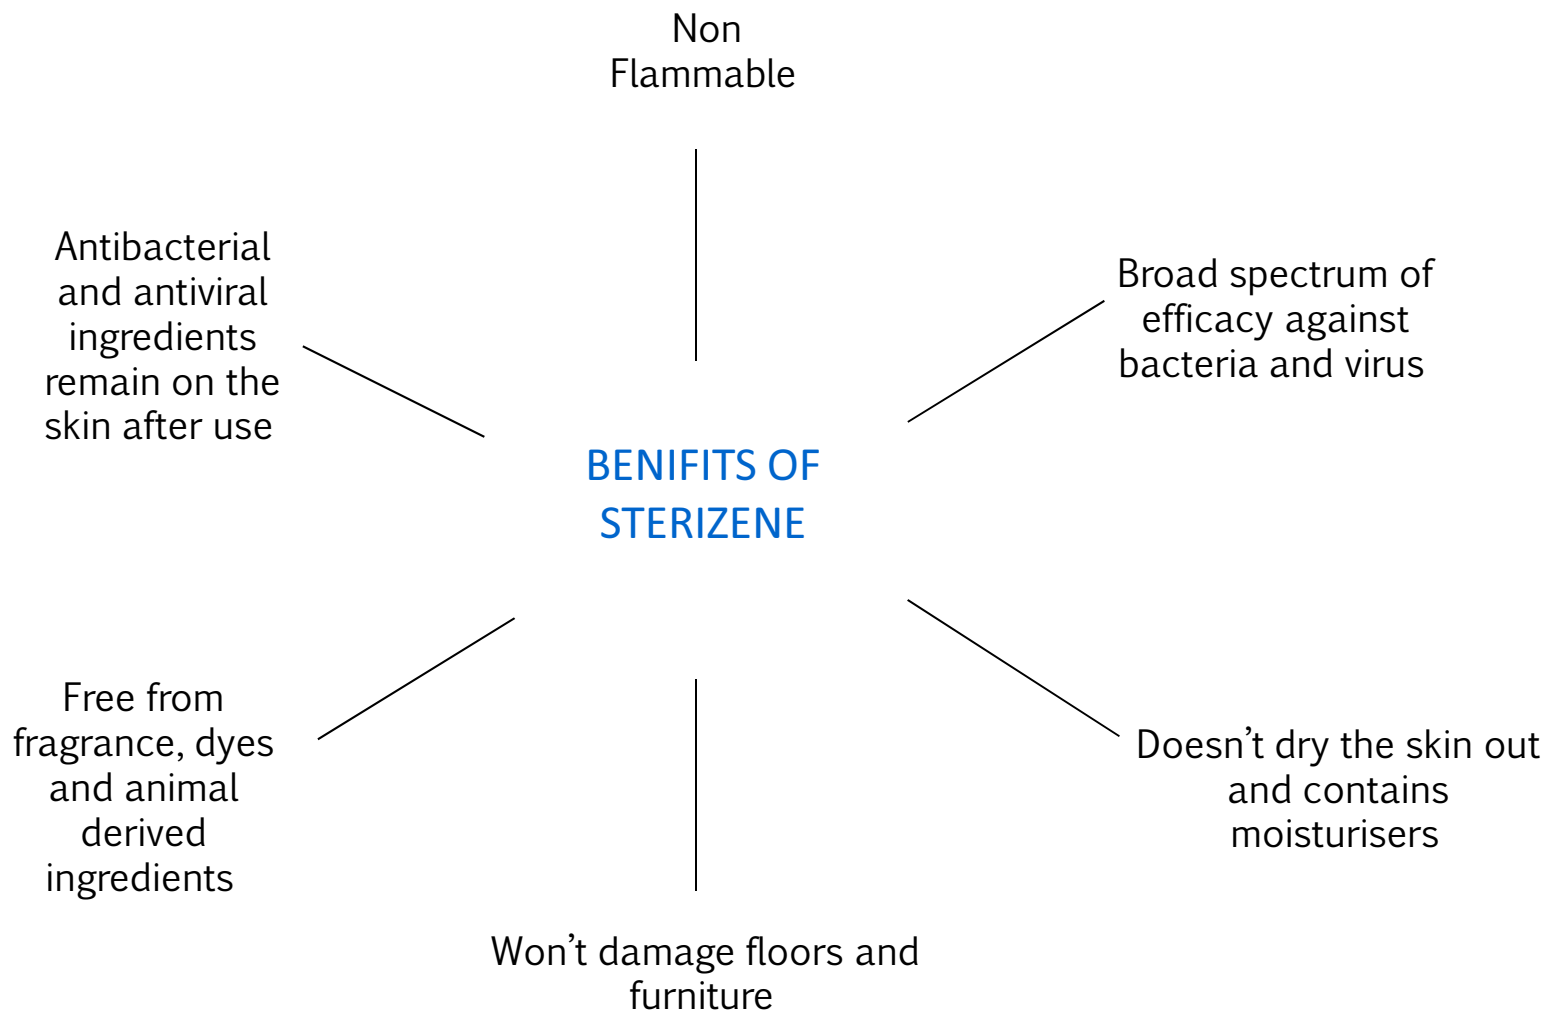

Swine Flu

KINDER TO HANDS

Being water based and enriched with moisturisers our product can be applied many times a day and unlike alcohol gel won't dry out, defat the skin or make small cuts sting.

These problems are due to the high alcohol level in the product. Our formulation is alcohol free and uses a blend of cationic ingredients which work together to give effective sanitisation without the negative points of alcohol gel as highlighted above.

RESEARCH & DEVELOPMENT

Extensive UK based research and development has resulted in a formulation containing an optimised synergistic blend of active ingredients which have been independently tested for efficacy against a broad range of bacteria and virus independent laboratories to the following standards;

- EN 1040
- EN 1276
- EN 13697
- EN 1656
- EN 1275
- EN 1500

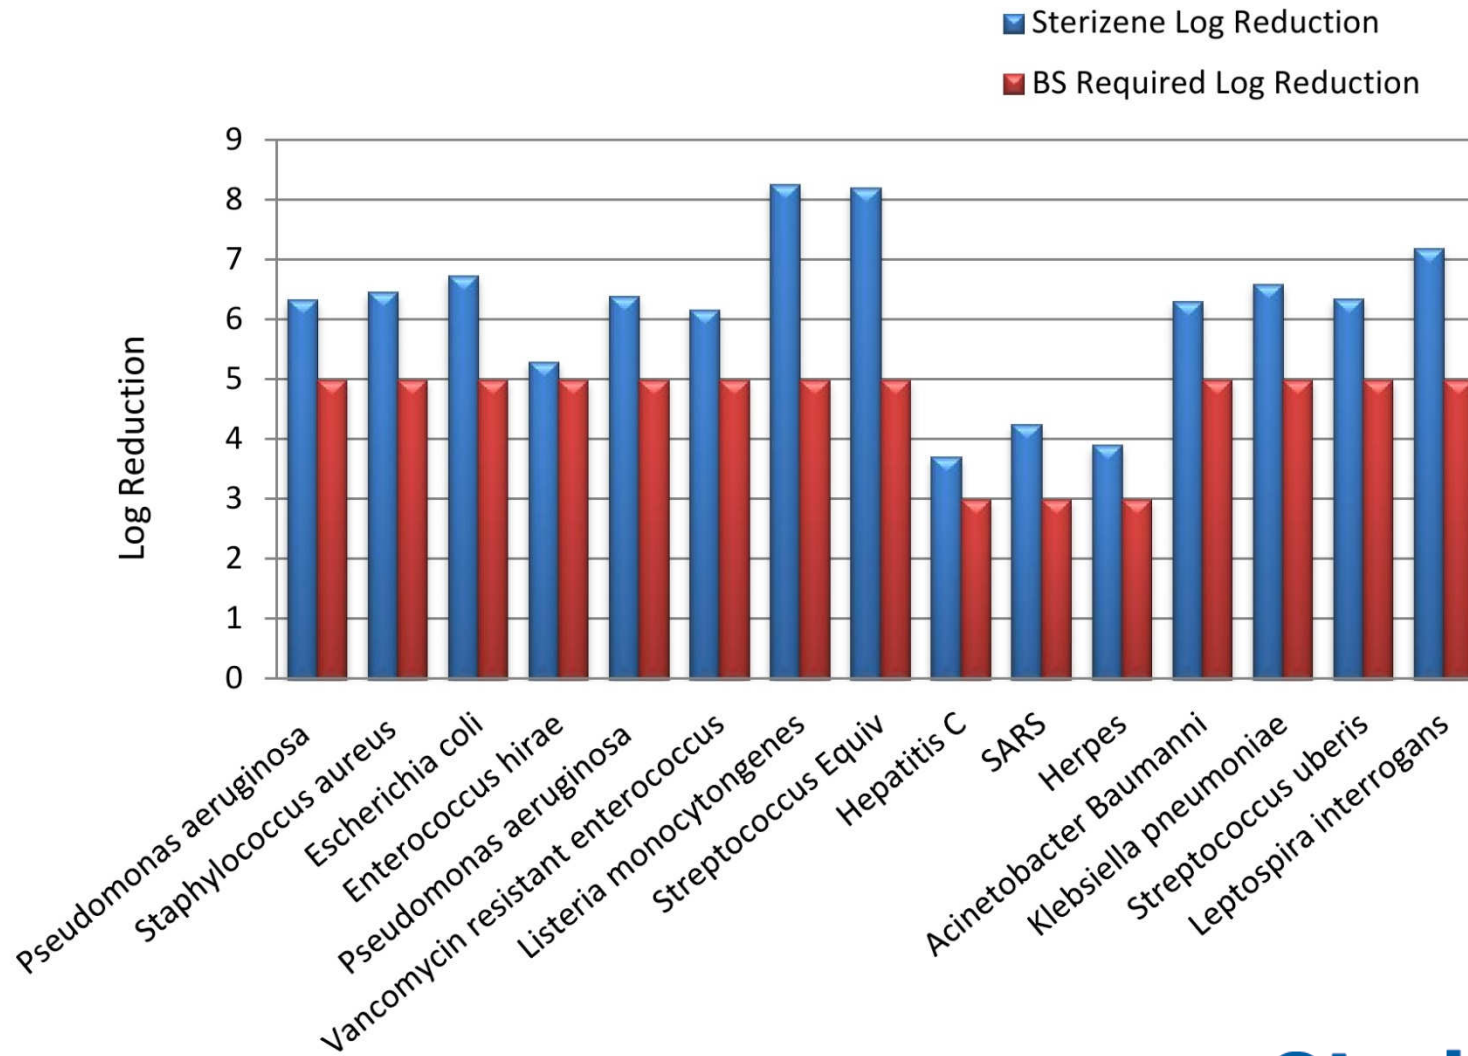

INDEPENDENT TESTING

The formulation has been proven to give rapid log reductions within minutes against the following bacteria and virus, further details and copies of the test certificate are available for review

Listeria monocytogenes	Vancomycin resistant enterococcus	Enterococcus hirae	Hepatitis C
Klebsiella pneumoniae	Pseudomonas aeruginosa	Clostridium difficile	SARS
Leptospira interrogans	Acinetobacter baumannii	Escherichia coli	MRSA
Streptococcus uberis	Staphylococcus aureus	Herpes simplex	H1N1

SUMMARY OF LOG REDUCTIONS

PRODUCTS

We can supply the product in a range of formats and pack sizes available for personal use, desk tops and wall units.

8ml Pen Spray

A compact and convenient spray unit which easily fits into pockets, bags and overalls. Each pen gives 40 applications

50ml Pump Foamer

An highly economical unit providing up to 250 applications and small enough to be easily carried in bags, pockets or left in the car.

500ml Pump Foamer

A desk top unit providing up to 2500 applications, this unit is ideal and a cost effective alternative to wall unit dispensers.

5 Litre

This bulk pack is suited for onsite refilling of wall dispensers and other dispensing systems capable of dosing product.

PRODUCTS

Our wall units provide a highly visible and easily accessible way of providing hand sanitisation at the entrance point to any building, room or area where access to a sink is not possible.

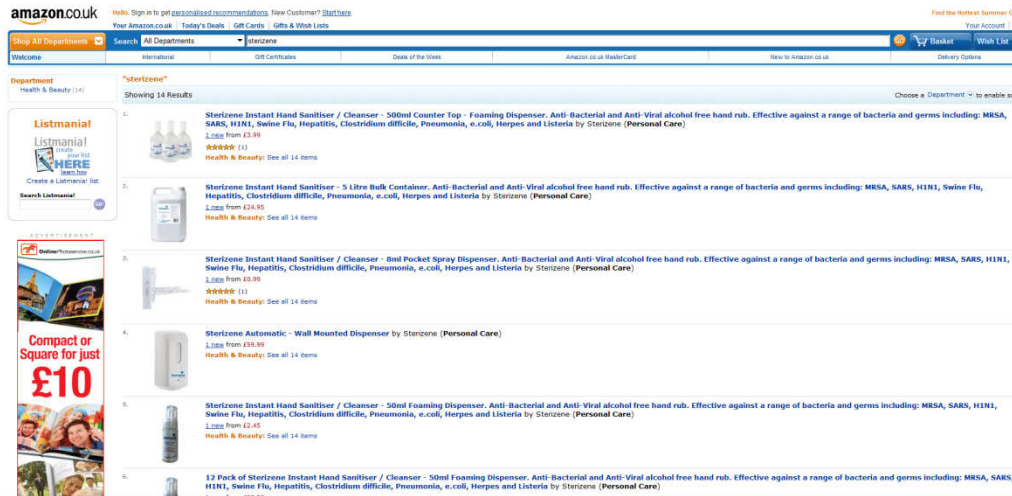

Automatic Wall Dispenser

With a refillable reservoir this touchless unit dispenses product directly into the hands.

Manual Wall Dispenser

Product is dosed directly into the hand with a single press of the panel at the base of the unit. This unit contains a refillable reservoir.
