

Self Tan & Related Products For Own Label

Through our research we have identified a combination of active ingredients which give a natural tanned appearance and the lowest possible odour during the tanning process. These are formulated with polymers, which when dispensed through the pump change the structure of the gel making it thinner and allowing it to be spread easily over the skin covering a limited area giving an even, streak free finish.

- ✓ Natural Tanned Appearance
- ✓ Quick Drying Times
- ✓ Minimal Odour
- ✓ Long Lasting
- ✓ Fades Evenly

100% Free From

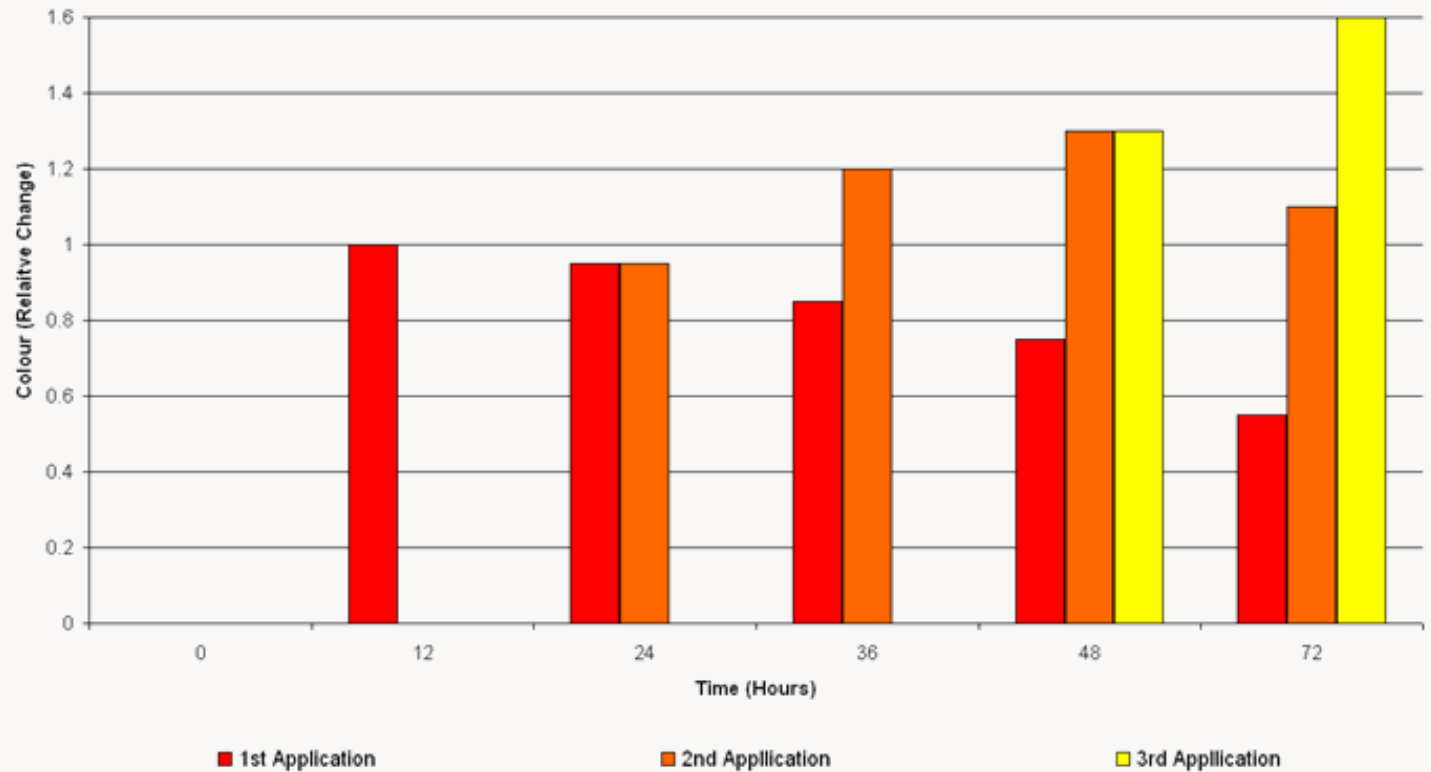

- ✓ Parabens
- ✓ Alcohol
- ✓ Silicones
- ✓ Fragrance
- ✓ Dyes
- ✓ Amines

The tanning gels are fragrance free to minimise any odour during tanning allowing users to apply product before going to bed and not impregnate the sheets with a fragrance designed to mask odour or in the morning to give a discreet tanning process during the day.

To give a complete system and the best results our self range also includes exfoliants for face and body which are SLES free and use Jojoba Oil beads to give gentle exfoliation preparing the skin for the tanning gel and a body moisturizer to help keep skin soft and smooth and maintain the developed tan. All the products contain Aloe Vera and Vitamin E and apart from the tanning gels all are lightly fragranced with summer Melon, Juicy Kiwi with a hint of Raspberry.

Due to the sensitivity of the tanning ingredients to sunlight which can lead to them decomposing these formulations need to be back in opaque packaging. We can put forward packaging suggestion to meet with your design brief.

Tan Colour Development

The above chart shows the colour development for the main tanning active DHA for each application at 24 hour intervals. The 1st application reaches full colour depth in 12 hours and is maintained for the next 12 hours after which it starts to decrease as skin cells are lost. The second and third applications noticeably increase colour depth further allowing users to build up to a shade that they are happy with, to maintain this colour the tanning gel should be applied every 48 to 72 hours. After the last application it takes around 5 days for the skin to return to its pre tanning colour

Exfoliating Jojoba Beads

These beads are formed by spray drying giving them a smooth spherical shape which gives gentle but effective exfoliation of dead cells and dry patches.

Aloe Vera

Aloe Vera has a strong reputation for soothing irritated skin after shaving or caused by exposure to the elements. It also has a reputation for aiding the cell regeneration for UV induced damaged making this a popular ingredient for the sun care and self tanning market

Vitamin E

Vitamin E is a well respect ingredient in the skin care field with protective anti oxidant benefits helping to guard skin from free radical induced damage as well as soothing irritation.

Daily Glow Face Moisturizer

Containing a touch of tanning agent and suited to light and fair skin tones, use daily to develop and maintain a healthy glow . Enriched with moisturizers, vitamins and an unique energizing complex to leave your skin soft, smooth and toned for an all round healthy appearance.

Rapid Tan Face Moisturizer

Develop a light golden tan within 4 – 6 hours of the first application which can be deepened with a further 2 to 3 applications to give the desired depth. Simply reapply every 3 to 4 days to maintain the tan.

Gradual Tan For Face & Body

Specially formulated for light and fair skin tones to give a healthy sun kissed glow from the first application. For a deeper tan apply the product daily for 3 to 4 days until the desired depth of colour is achieved.

Rapid Tan For Face & Body

Quickly develop a noticeable natural looking tan within 4 to 6 hours of the first application which can be deepened with an additional application if required. As with all our tanning products there is minimal odour during tanning and the colour will fade evenly over 5 to 7 days following the last application.

Exfoliating Body Wash

Exfoliation is an important first step in the tanning process which increases the evenness of colour development by removing dead skin cells and contaminants from the surface of the skin. Our SLES free formula uses Jojoba beads to gently exfoliate away dead cells, dry patches and impurities leaving it soft, smooth and ready for the application of the tanning gel.

Exfoliating Face Wash

A creamy exfoliating face wash enriched with Aloe Vera, Vitamin E and moisturizers to condition skin while jojoba Oil beads gently remove dead skin cells, and impurities preparing the skin for the application of the tanning gel. Exfoliation of the face is important for achieving an even tanned appearance especially for older users and those with dry skin as dead cells build up at the surface preventing the tanning agents reaching the rich protein layer to develop the colour

Moisturizing Body Lotion

During and after developing a tan its important to keep the skin moisturized to avoid uneven wear and patchiness that can occur as dead cells are shed at different rates over the body. Our body lotion uses an unique liquid crystal system to deliver moisturizing ingredients to where they are needed along with Aloe Vera and Vitamin E and Grape Seed Oil to form a natural barrier across the skin locking in moisture.
